Press Release

## Fiilex announces the C360 and C365 Compact LED fixtures

### For Immediate Release

Richmond, CA September 2017.

Fiilex announces the C360 and C365 Compact LED fixtures. The C360s are the first Fiilex products designed specifically for use with standard pipe-clamps, making them perfect for small-to-medium studios that require a versatile, broadcast-quality lighting solution. Their design also includes an integrated power supply, greatly simplifying overhead cable management.

The C360s are compatible with a wide range of light-modifying accessories. Smaller magnetic attachments include diffusers, fresnels, honeycombs, and gel holders. The safety-minded design of the C series includes integrated lockdown screws for available accessories.

The C365 features the 5" Zoom Fresnel, a powerful attachment that narrows the C365's beam, increasing intensity by 800% at full focus.

Each fixture is also RJ45 DMX512 compatible, allowing users to operate them remotely via the Fiilex DMX Controller, or any standard DMX board.

In addition to being extremely low-profile, these 90W lights boast many of the same advanced control features of the Fiilex second generation P-Series, including wide-gamut color tuning, full dimming, and hue adjustment. At every setting these lights maintain excellent 95+ CRI.

- Broadcast Quality.
- Extremely compact footprint ideal for smaller studios with height restrictions.
- Integrated power supply for easy rigging.
- DMX512 Controllable.
- Cost effective.
- Perfect solution for:
  - Studio Designers and AV Integrators
  - PEG studios
  - House of worship
  - Vloggers

Available for immediate delivery.

#### About Fiilex:

In 2001, DiCon Fiberoptics, Inc, a leader in Photonics, recognized the potential of LED Technology to revolutionize the lighting industry. They gave their engineers the difficult task of designing and manufacturing a best in class LED. It had to be bright while maintaining a high quality of light, it had to effectively disperse heat, be as small as possible, and be color tunable. After 7 years of dedicated research and experimentation, DiCon created and patented the Dense Matrix LED.

The Dense Matrix LED, allows for more LEDs closer together on a single array. This allows for all the chips to emit through a single lens, making for an effective point source light, that creates a single shadow. The array consists of multi channel LED's which gives the ability to color tune the light.

In 2013 the Fiilex brand was created to bring the power of the Dense Matrix LED to the Film/Broadcasting/Photography industries. Since its start, Fiilex has won major contracts in the North American broadcast market, established a wide dealer network around the world and is one of the newest and most sought after lighting brands in the market.
